What is a hack?

```
def hack():
```

```
    / 'hak/
```

```
    1. "an ingenious move"
```

```
    2. "a shortcut"
```

```
    i) bad → break into systems
```

```
    ii) good → do impressive stuff fast..
```

Definition: Sundai Club

In Medical Affairs, a good hack is a **clever, safe shortcut — never a way around compliance.**

For the next two days, you are hackers

def hacker_vs_engineer():

/'hakər/

- fast
- uses structure
- flexible, prototypes

▲ **YOU, FOR TWO DAYS**

/,enjə'nɪr/

- meticulous
- builds structure
- stable, robust

Source: Sundai Club

NOW · DAYS 1-2

Hack

Prototype fast. Prove it works.

LATER

Engineer

Harden what works.

Two ways to use AI

EFFICIENCY AI

Do today's work better

Faster · cheaper · optimized

VS

OPPORTUNITY AI

Do work that was never possible

New value · new categories

Framework: Nathaniel Whittemore (NLW), *The AI Daily Brief* podcast

EFFICIENCY AI

Do your existing work better

Speed The same work, done faster

Cost Less effort and spend per output

Process Optimize the workflows you already run

The foundation of most AI adoption

Risk: treating AI as just incremental improvement

Unlock what was never possible

A mindset shift: work that was impossible or outside your current scope

New categories: innovation and value 'orthogonal' to your business

Race out ahead instead of competing on table-stakes efficiency

Not in conflict: opportunity is built on efficiency

//

**What might we do now
that we never would
have considered before?**

— Nathaniel Whitemore (NLW), *The AI Daily Brief*

Use both. Build the second on the first.

What each looks like in Medical Affairs

Challenge	Efficiency AI · do it faster	Opportunity AI · do what wasn't possible
Publications Brain	Draft and QC abstracts and plain-language summaries faster	A living publication plan that spots gaps and conflicts across every output in real time
Insights Engine	Auto-tag and summarize a quarter of field notes	An always-on insight radar that flags emerging scientific signals and drafts the leadership decision brief
Congress Monitor	Summarize sessions overnight	A swarm that maps what changed in the competitive and evidence landscape and proposes the response plan before you fly home
Field Intelligence Engine	Pre-call briefs in minutes	Every HCP conversation prepared and closed-loop, with coverage gaps found and routed automatically

Your four challenges

Publications Brain

What to publish, what to stop, and how to keep every output consistent

Insights Engine

Turn a quarter of field records into decisions leadership can act on

Congress Monitor

The congress just ended. What changed, and what do we do?

Field Intelligence Engine

Walk into every HCP conversation prepared, and close the loop after

Day 2: what you'll present in 20 minutes

20

minutes per team on Day 2

Five parts, one story: from the problem to the impact

A watercolor-style illustration of a woman with long dark hair, wearing a blue jacket and a red scarf, smiling as she steers a wooden ship. The ship is on a blue sea with white waves. In the sky, several small, glowing orange and blue robot-like characters are flying, some holding onto the ship's rigging. The overall style is artistic and whimsical.

Rules of the hack

1

Practice data only

Fictional Nordvant Biopharma or your own non-confidential data. **Never patient or confidential data.**

2

Human at the helm, AI in the loop

A person reviews and decides at every gate.

3

Ship something that works

Prototype fast. Harden later.

Go.

Hack for opportunity,
not just efficiency.

1 • Pick

Choose one of the four challenges

2 • Build

Prototype fast with practice data

3 • Present

20 minutes on Day 2, problem to impact
